

Friends Of Renewable Technologies Environmental Sustainable

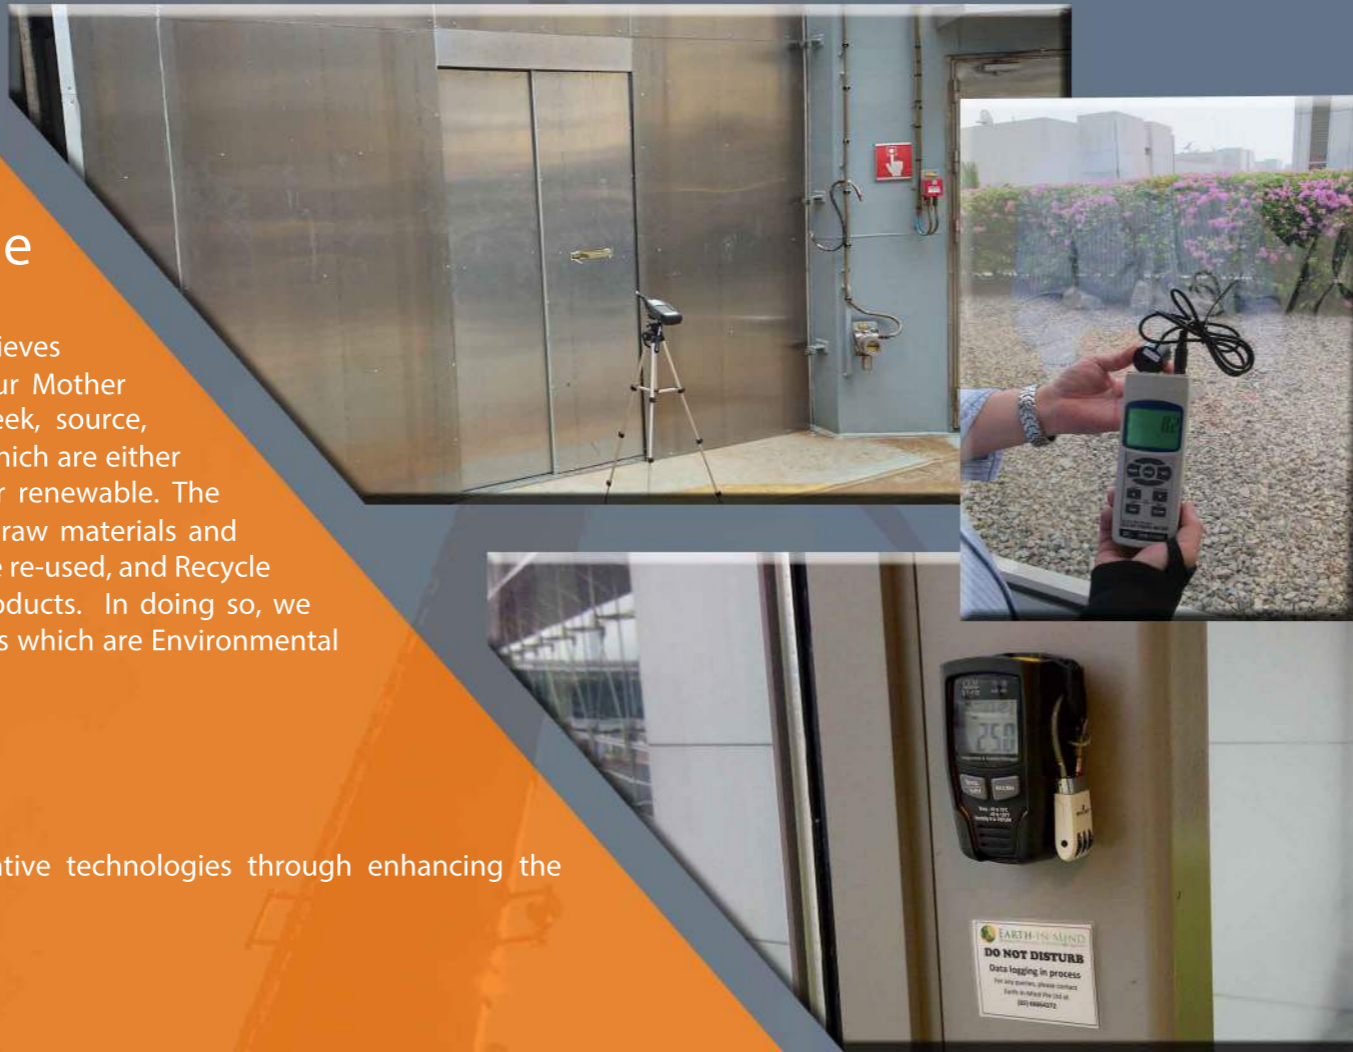

FORTES Innovations Pte Ltd is an organization who believes in making more friends than foes, especially with our Mother Earth and the environment. Thus, we constantly seek, source, search and bring together products and/or services which are either environmentally-conscious, sustainable, innovative or renewable. The 3Rs are major considerations in our quest – Reduce raw materials and wastage, Retrieve and salvage common materials to be re-used, and Recycle materials by re-working them as inputs into new products. In doing so, we consider ourselves Friends Of Renewable Technologies which are Environmental and Sustainable.

Our Mission

To help companies leverage renewable and innovative technologies through enhancing the sustainability of buildings for the future.

Our Vision

To become the choice provider of renewable technologies and environmental solutions.

Testing and Commissioning

 We conduct feasibility studies, pre-and-post installation measurement, logging and analysis to ensure that the right products have been used to achieve the desired results. Through our analysis, we are able to correlate and further advise on related design issues.

Product Consulting

 We specialize in helping organizations drive growth and increase their competitive advantage through sustainable solutions. Our product sustainability consulting services consist of:

- Using software solutions to quantify the environmental effects of products and calculate their carbon footprint
- Test-bed installation and assessment
- Product testing and commissioning

Installation

 We usually work with main builders or main contractors on the installation of our solutions as most clients have their regular installers or retrofitters. The installation processes are relatively easy for the technically-proficient as we provide workshop supervision, on-site visits, and drawings to facilitate and guide. However, we can also provide supply-and-install as a package for clients who prefer a one-stop station.
